## Proudly Made in the USA

Jennifer Polanz

As you just read (if you're coming from the cover story), diversifying your product options might be a good idea. Here's a section of products that are made in the U.S., and in many cases, with components that are from the U.S., too. We had an outpouring of interest for this feature, too, so look for Part 2 with more products in the August issue.

### DeWitt

For nearly 50 years, DeWitt, based in Sikeston, Missouri, has been producing landscape fabric and other tree and plant protection products. Their Contractor's Select Plus 2.5 landscape fabric is a spunbond fabric that's 50% stronger than Contractor's Select to go under pavers and gravel. The fabric is tough and durable, but still allows air, water and nutrients to pass through for beautiful results—no herbicides required. Made in North Carolina, the fabric is available in black and gray.

### Dramm

Dramm, based in Manitowoc, Wisconsin, manufactures a wide variety of watering products for commercial growers and for retail, as well as a line of organic fertilizer. Some products have a combination of USA-made and international components, like the Dramm Rain Wands. Products like the 50-ft. ColorStorm Premium Rubber Hose (shown here), all of the ColorStorm Premium Soaker Hose and Soaker Rings, and the 2-, 5- and 7-liter Watering Cans are all 100% made in the USA, as well as the Drammatic Organic Fertilizer.

### Espoma: Plant-tone

Plant-tone is the original all-purpose plant food for organic gardening. It's a rich blend of the finest natural and organic ingredients and enhanced with humates and beneficial microbes. No sludges or fillers are ever used. Plant-tone is made in the USA in Espoma's state-of-the-art solar-powered manufacturing facility in Millville, New Jersey. ### Henri Studio: Leaf Birdbath

Sitting atop extended branches, the Leaf Bird Bath from Henri Studio provides a beautiful and welcoming respite for your fine-feathered friends. Made of America from Indiana limestone, Illinois sand and cement, and Lake Michigan water, Henri Studio also has an extensive line of statues, fountains,

birdhouses and more made in Wauconda, Illinois. [henristudio.com](http://henristudio.com)

### HIP Labels: Plant Tags

The vast majority of plant tags in the HIP Labels lineup are made in the USA, shipping from plants in North Carolina, Tennessee and New Jersey. Not only that, but the raw materials used in the plastic tags come from Wisconsin, Missouri and Indiana, said owner Bob Lovejoy. The eco-friendly MilkMade line of plant tags is partially made from recycled milk jugs and is recyclable itself. The substrate for that line is

Made in the USA, too, providing a domestic, eco-friendly option for tags. That domestic production allows for faster shipments, especially for smaller jobs that require a quick turnaround. Bob also teased a new introduction coming at Cultivate'25 this July. You can visit their booth #3519 at the show to find out more. [hiplabels.com](http://hiplabels.com)

### M&M Wintergreens: Large Wreath

This large wreath (that takes two people to carry!) is made on a 60-in. ring with an approximate outside diameter of 86 in. It contains Noble Fir, Incense Cedar, Juniper and pine cones, all of which are harvested from forests in the U.S. The wreath is produced/assembled in the U.S., as well. About 95% of M&M Wintergreens' offerings originate in America. [wintergreens.com](http://wintergreens.com)

### Organic Mechanics: Biochar Blend

Organic Mechanics, based in Chester County, Pennsylvania, sources most ingredients from the U.S. for its products, and its Biochar Blend Soil Amendment is 100% sourced here and manufactured at its new facility just outside Richmond, Virginia.

Fully charged and ready to use on all types of plants,

the Biochar Blend contains biochar, compost, earthworm castings, alfalfa meal, bone char, kelp meal, azomite and zeolite. The biochar is carbon-rich, made from southern pine via a unique process called pyrolysis. Most of the main ingredients come from within 100 miles. Those ingredients are blended together before undergoing an inoculation process, which makes sure it works for plants on day one. [organicmechanicsoil.com](http://organicmechanicsoil.com)

### **Treleaf: Zella Wooden Extendable Plant Support**

Zella upgrades the aesthetic of any plant while supporting it. And the best part, it's modular—it can be made taller and wider just by adding extensions. Zella is made in Treleaf's workshop in Acworth, Georgia, from U.S.-grown red cedar. They're cut from cedar planks using CNC lasers and the stakes are coated with waterproof coatings. The clips that are used to attach the extensions are also 3D printed in the workshop. Packaging is sourced from an Atlanta-based packaging manufacturer.
