Cool New Plant Alert

Jennifer Polanz

A hardy snapdragon series, Terra Nova Nurseries' first foray into snaps, seemed like a worthy news item to share. The new for 2026 Antirrhinum REVELATION series has three sun-loving, shrub-like perennial varieties: Blush, Cream and Fuchsia. The new collection features rust-free foliage and an abundance of blooms in May and June that attract pollinators and hummingbirds while the plant is deer-

resistant and drought-tolerant. As a Northeast Ohio gardener myself, what stood out most is this series' USDA hardiness of Zones 6 to 10.

For growers, the finish time from a liner in a 4-in. pot is about four to six weeks, while finish time from a liner to a 1-gal. pot is six to eight weeks. For more growing information, photos and other details, visit terranovanurseries.com and look for them under Products. **GP**
